Art Unit: 3662

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-26, drawn to a circuit and a method for receiving a signal, classified in class 342, subclass 362.
 - II. Claims 27-34, drawn to a circuit and a method for selecting a reference channel, classified in class 455, subclass 277.1.
2. Inventions group 1 and group 2 are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group 2 has separate utility such as in apparatus and a method without the second signal being orthogonal relative to the first signal or the second polarization being orthogonal to the first polarization.
3. Inventions group 1 and group 2 are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group 1 has separate utility such as in apparatus and a method without selecting a reference channel.
4. Because these inventions are distinct for the reasons given above, the search required for group 1 is not required for group 2, and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
